

Fish-habitat relationship development

ISEMP and CHaMP Development
Team

January 11, 2013

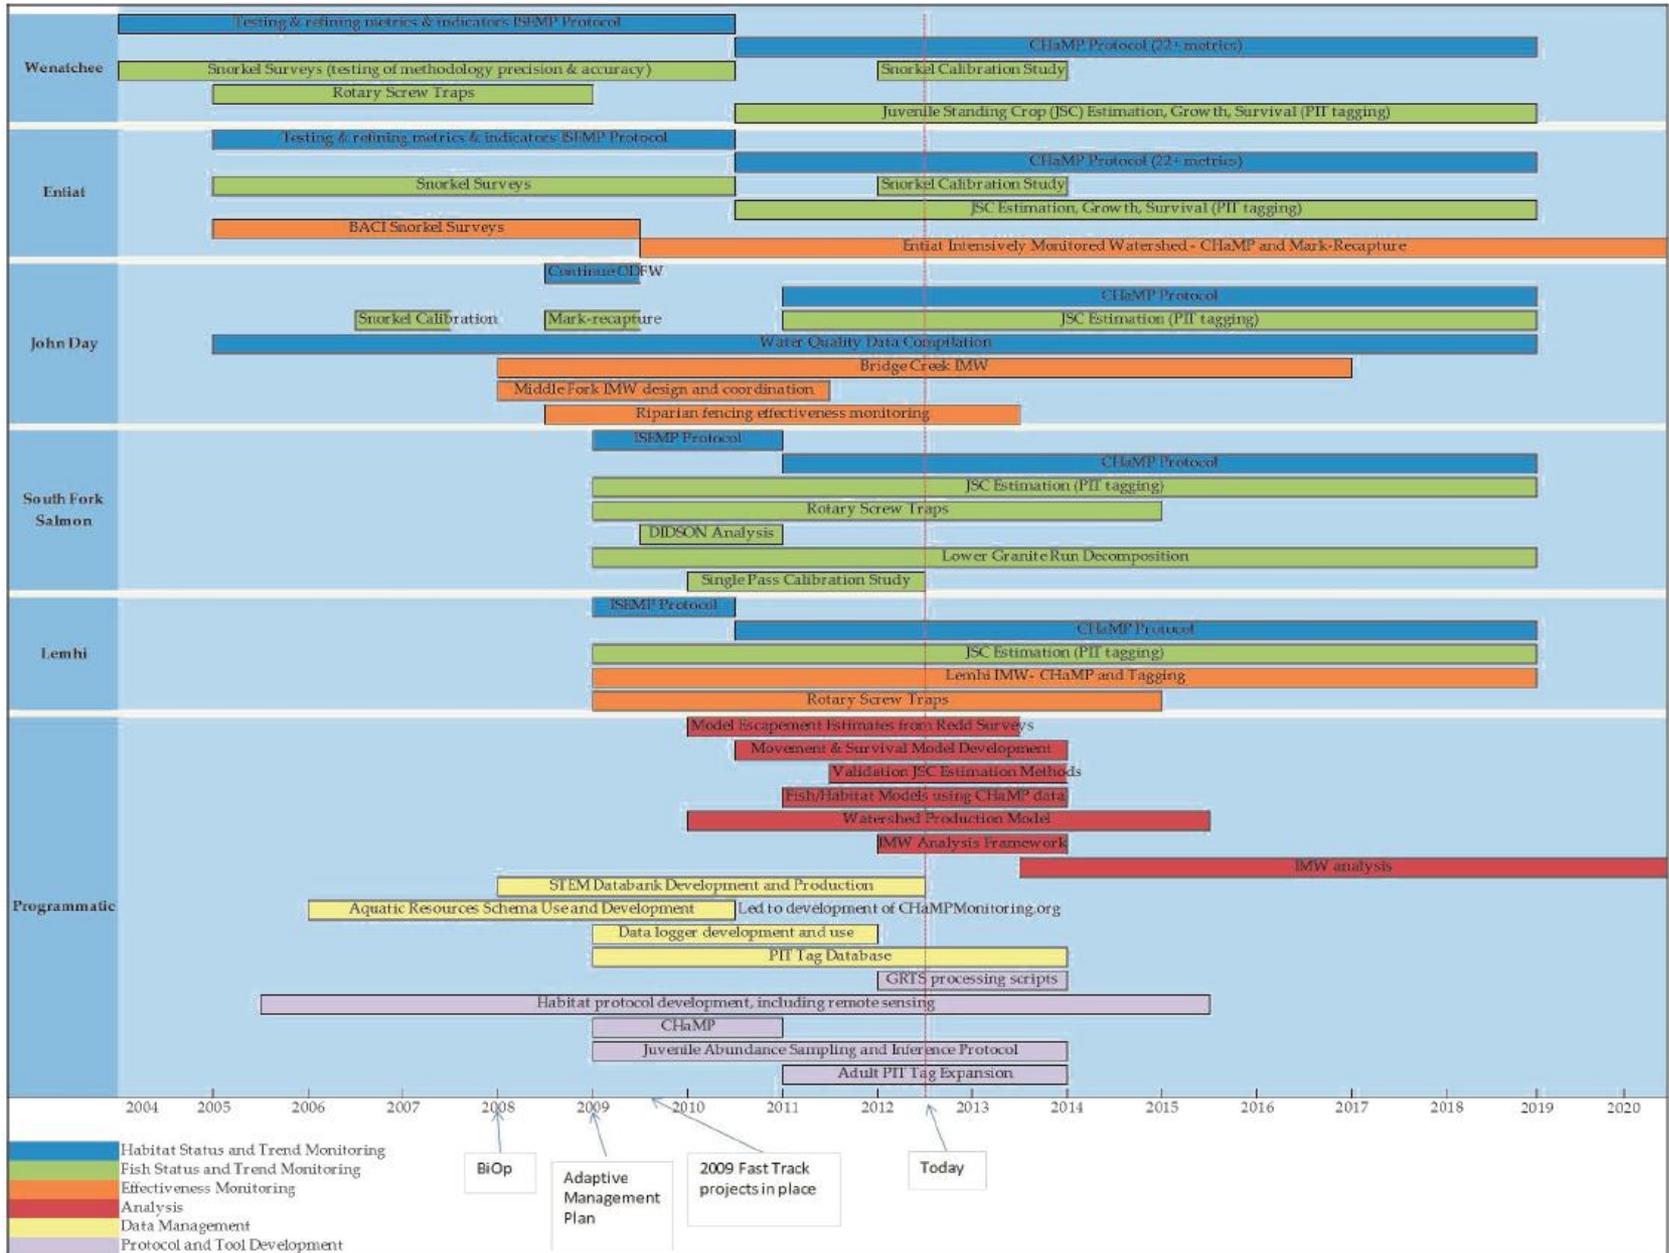

Ultimate goal of ISEMP and CHaMP is to develop fish-habitat relationships that feed management decision-making processes

- Habitat quality / quantity assessments
 - status monitoring
 - FCRPS BO, Recovery Plan progress evaluation
- Restoration action planning
 - rehabilitation program design
 - project prioritization

Fish-habitat relationship development methods that ISEMP / CHaMP and partners are employing

1. Unstructured correlation between fish and habitat metrics
2. Structured correlation between fish and habitat metrics
 - 2.1 Habitat Suitability Indices
 - 2.2 Structural Equation Modeling
3. Mechanistic modeling
 - 3.1 Bioenergetic based models
 - 3.2 Production function based models
4. Experimental design

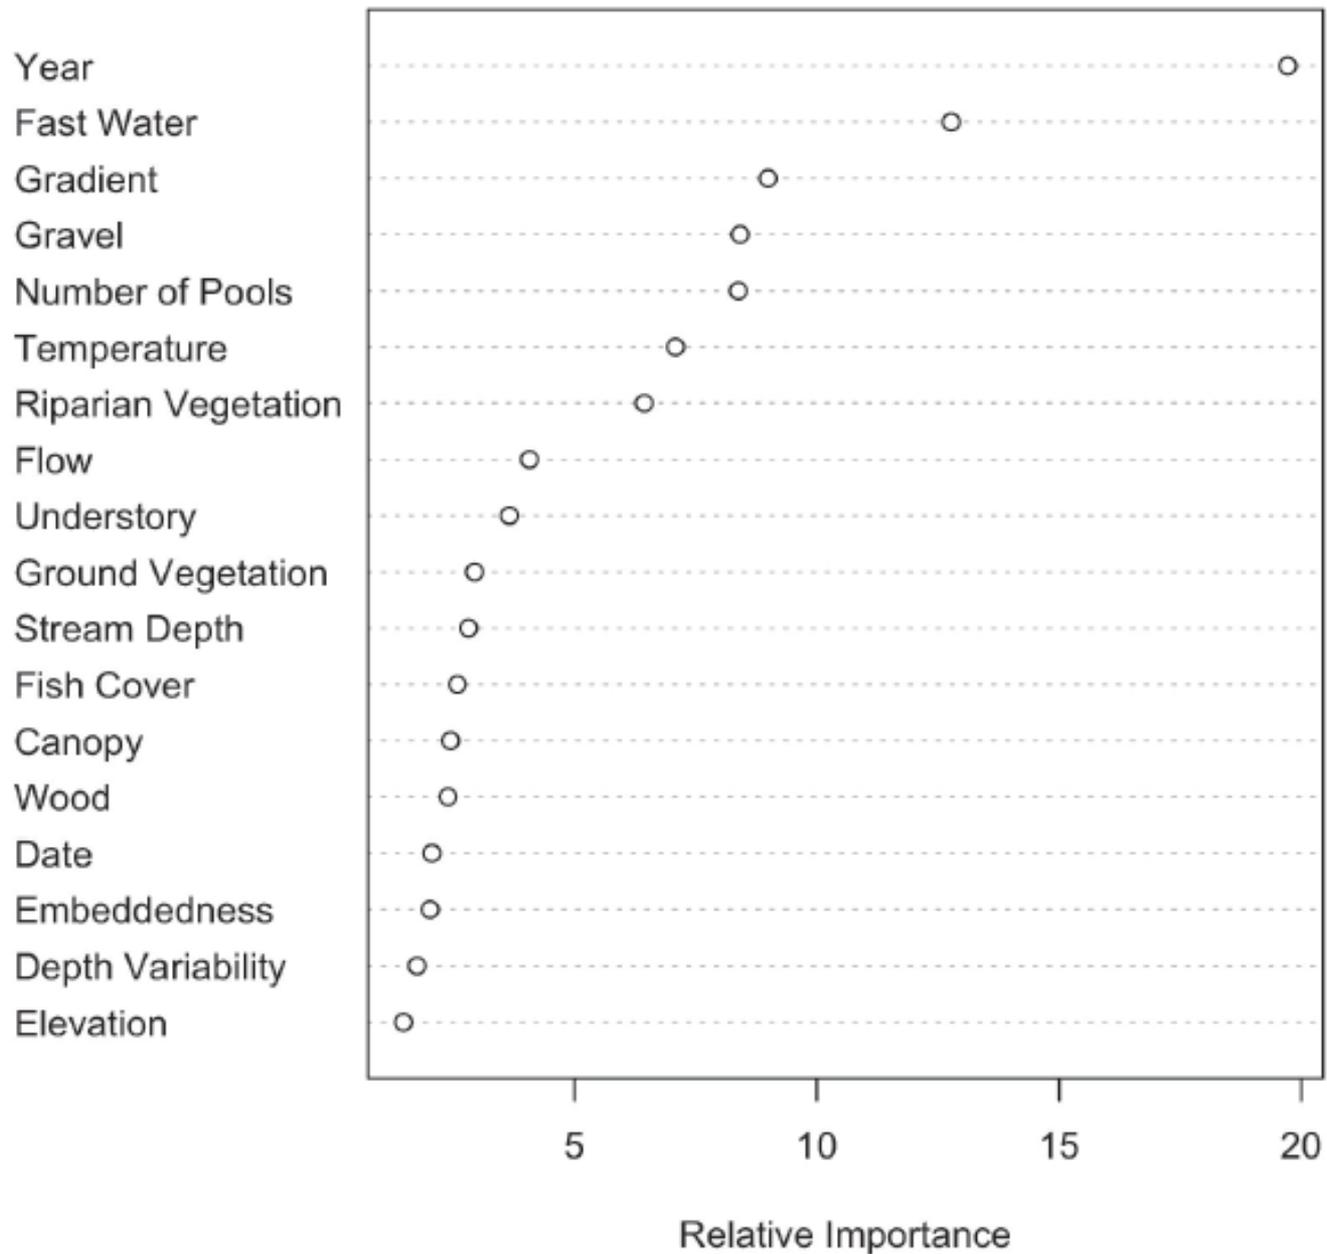

ISEMP – CHaMP Timeline

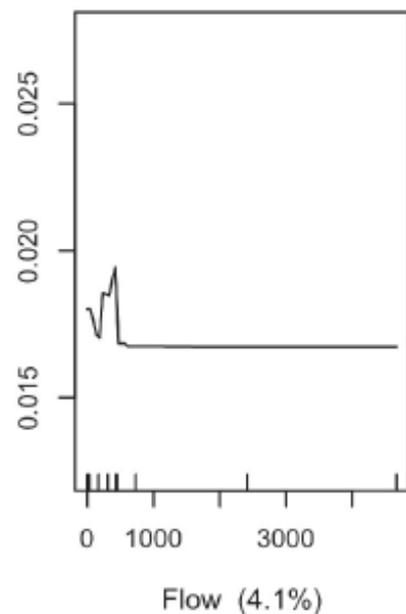

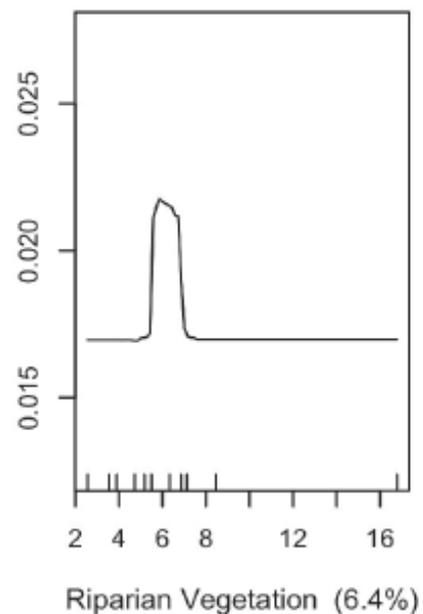

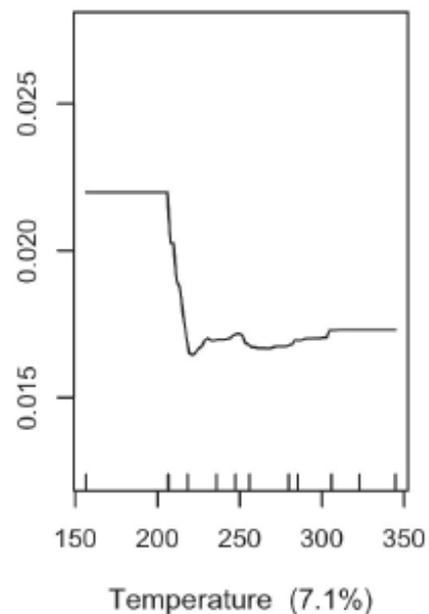

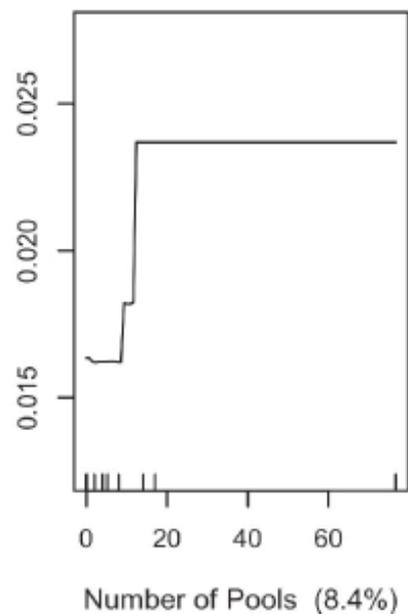

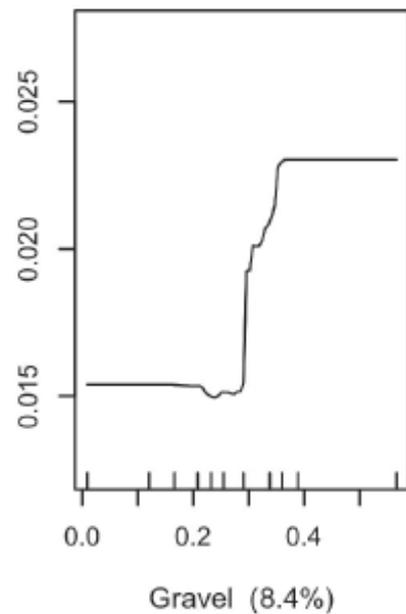

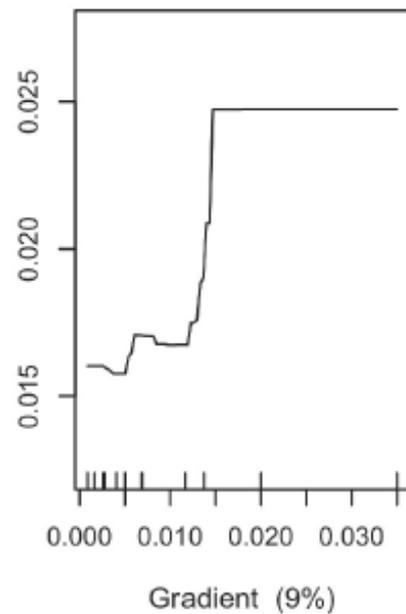

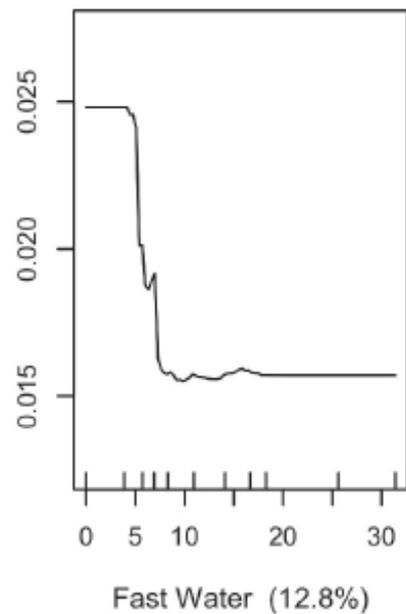

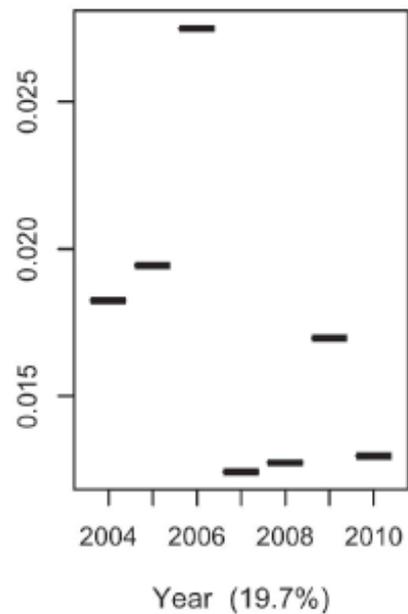

Fish-habitat relationship development methods that ISEMP / CHaMP and partners are employing

1. Unstructured correlation between fish and habitat metrics
2. Structured correlation between fish and habitat metrics
 - 2.1 Habitat Suitability Indices
 - 2.2 Structural Equation Modeling
3. Mechanistic modeling
 - 3.1 Bioenergetic based models
 - 3.2 Production function based models
4. Experimental design

ISEMP Watershed Model

-Multi-Stage Beverton-Holt

$$R_{t+1} = \frac{aS_t}{b + S_t} \longrightarrow N_{i+1,t+1} = \frac{N_{i,t}}{\frac{1}{p_{i,t}} + \frac{1}{c_{i,t}} N_{i,t}}$$

where

- $N_{i,t}$ = number of fish at life stage (i), time (t)
- $N_{i+1,t+1}$ = number of fish in next life-stage (i+1) and time (t+1)
- $p_{i,t}$ = **productivity**, or maximum survival rate for life-stage (i)
- $c_{i,t}$ = **carrying capacity**, or maximum numbers that survive life-stage (i)
- Moussalli & Hilborn (1986)

How to relate to habitat?

ISEMP Watershed Model

-Sharma et al (2005)

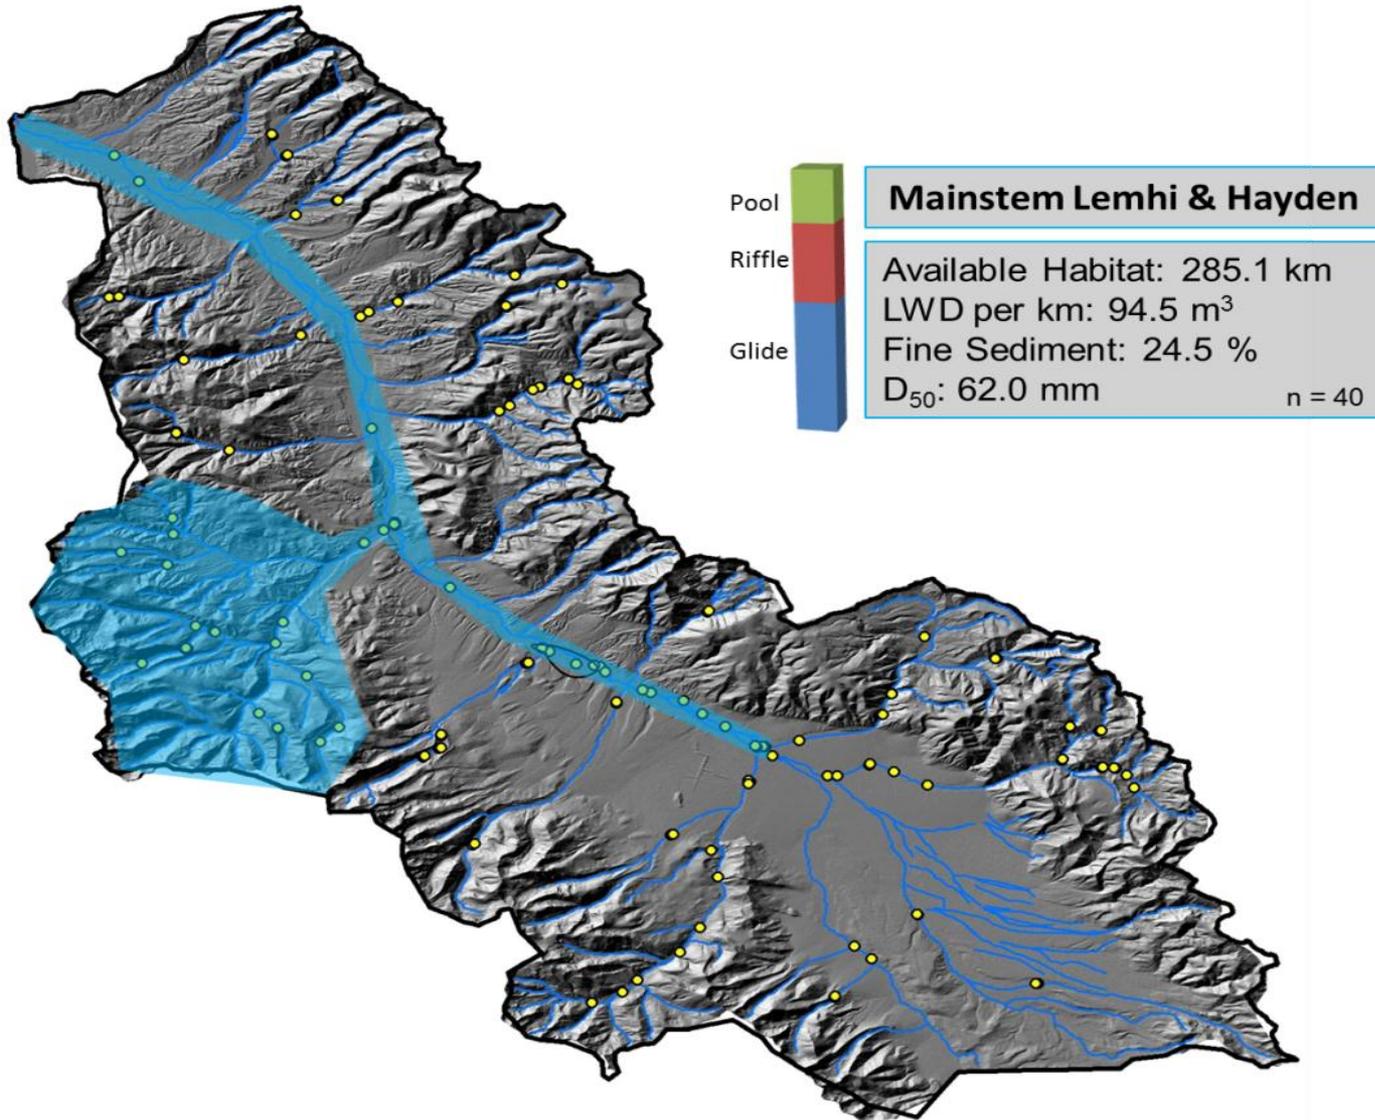

$$N_{i+1,t+1} = \frac{N_{i,t}}{\frac{1}{p_{i,t}} + \frac{1}{c_{i,t}} N_{i,t}}$$

The Basic Watershed Model

$$N_{k,i+1_t} = \frac{N_{k,i_t}}{\frac{1}{Sr_i \times \frac{\sum_{q=1}^n [E_{i,q}] \times [L_{q,k}]_t}{\sum_{q=1}^n [L_{q,k}]_t} + \frac{1}{A_k \times \sum_{j=1}^n \left[\left[\sum_{q=1}^n [M_{j,q}] \times [L_{q,k}]_t \right] \times [D_{j,i}] \right]}} N_{k,i_t}}$$

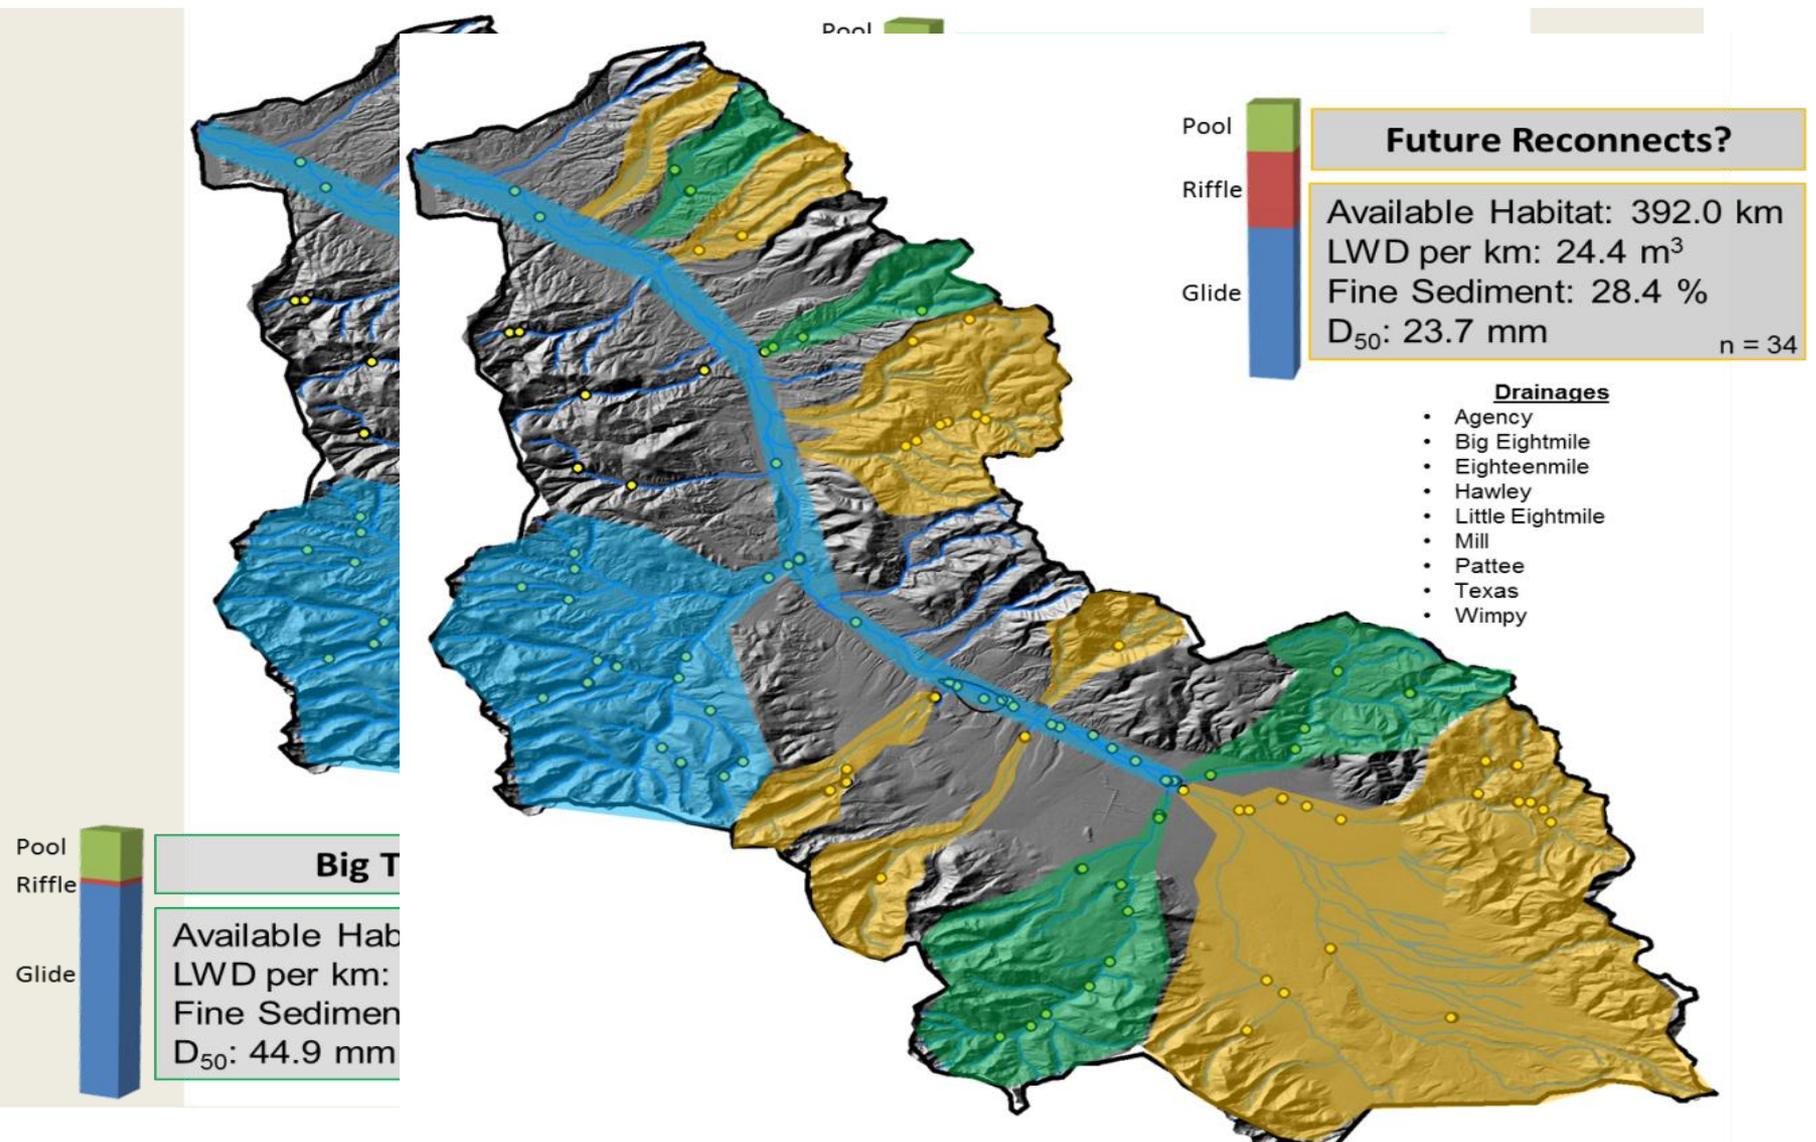

ISEMP Watershed Model

- Flexible modeling environment that informs freshwater productivity as a function of:
 - Management actions
 - Habitat conditions
 - Fish population characteristics
- Informs management actions (i.e. Lemhi tributary reconnections)
 - Work in the Lemhi emulates other management actions
 - Instream structure placement to increase pool area
 - Riparian rehabilitation to decrease water temperature
 - Etc.
 - Identify the life-stage(s) that limit a populations productivity

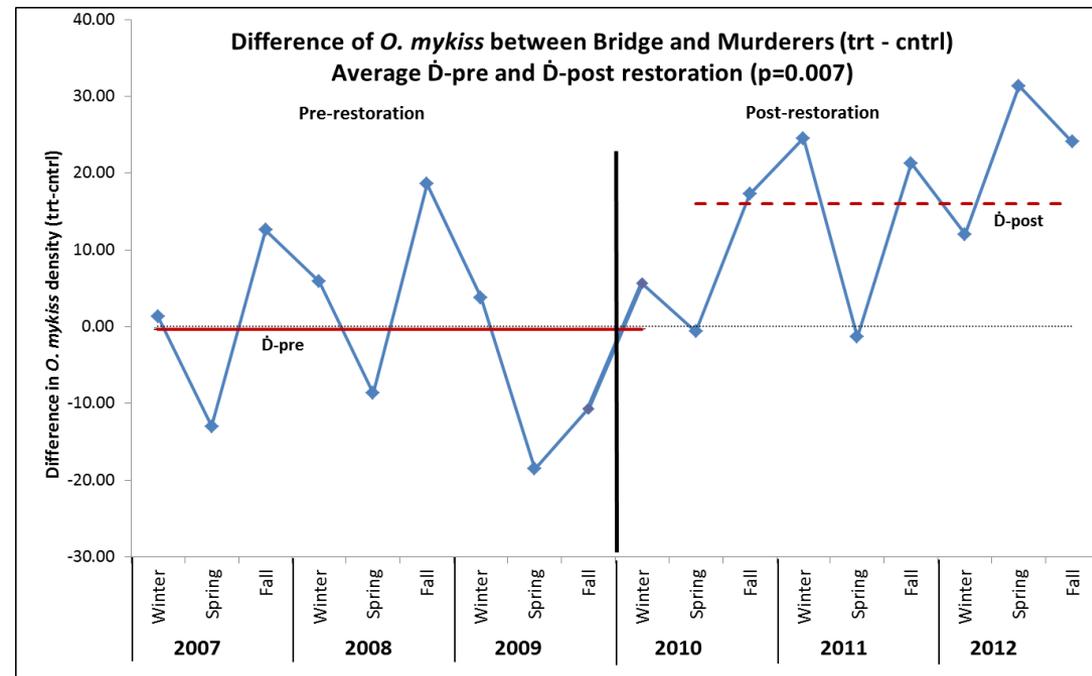

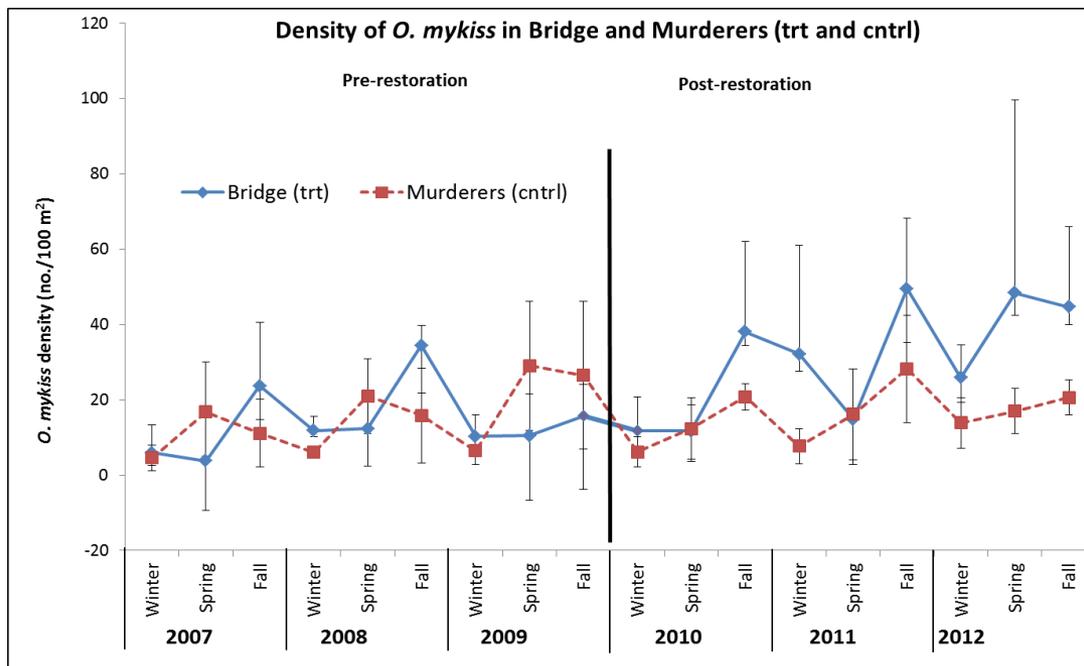

Fish-habitat relationship development methods that ISEMP / CHaMP and partners are employing

1. Unstructured correlation between fish and habitat metrics
2. Structured correlation between fish and habitat metrics
 - 2.1 Habitat Suitability Indices
 - 2.2 Structural Equation Modeling
3. Mechanistic modeling
 - 3.1 Bioenergetic based models
 - 3.2 Production function based models
4. Experimental design

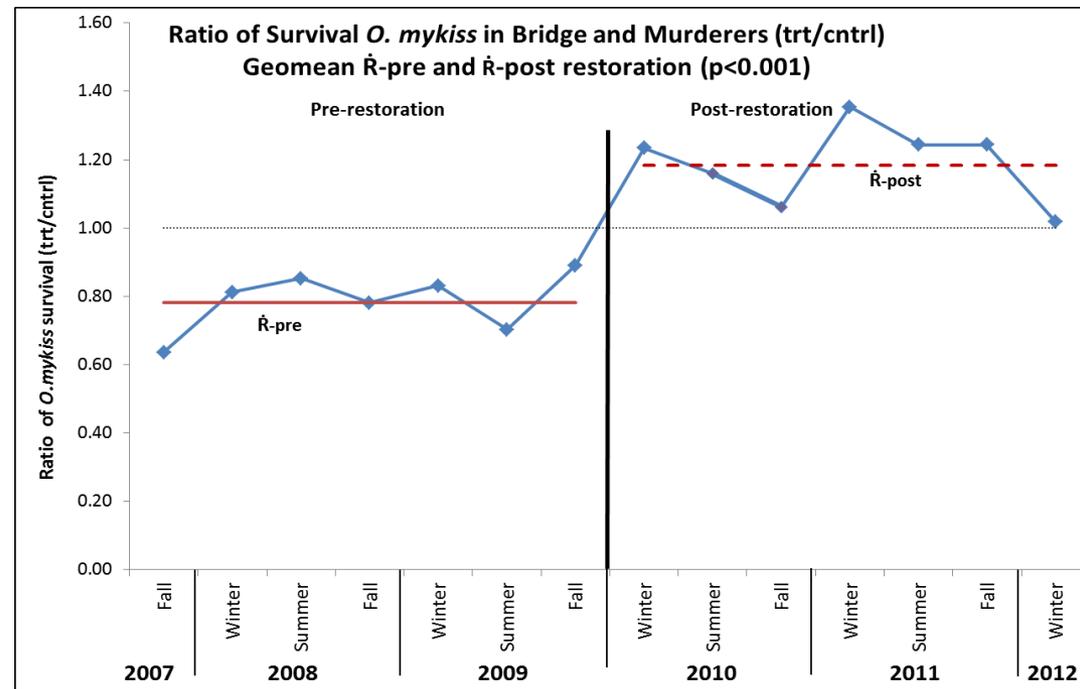

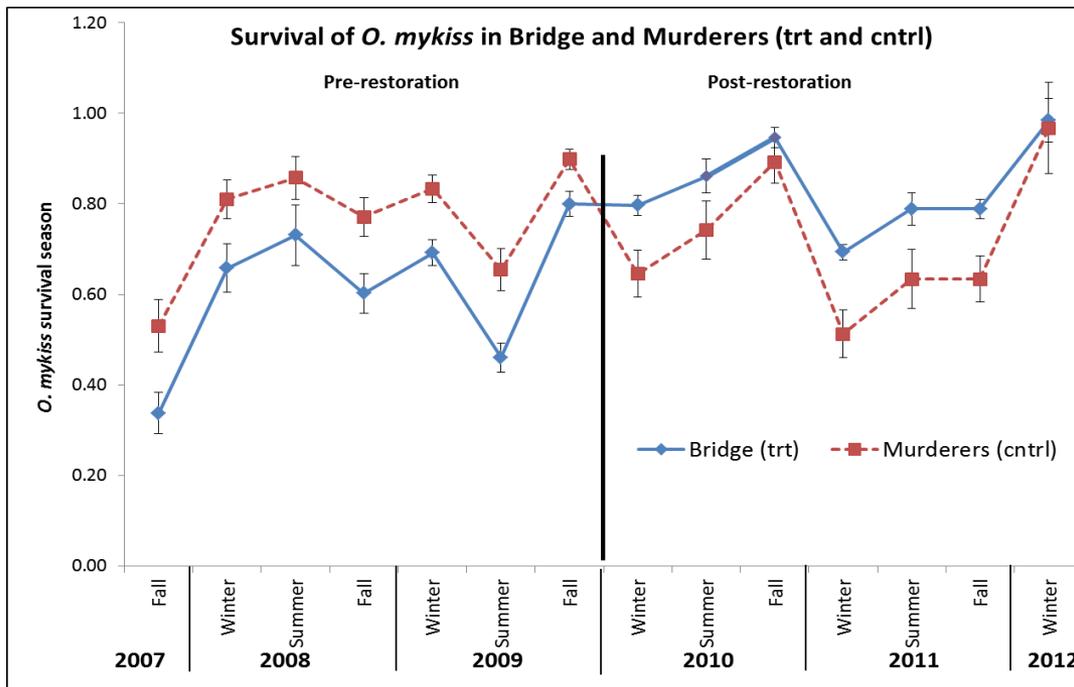

Bridge Creek IMW

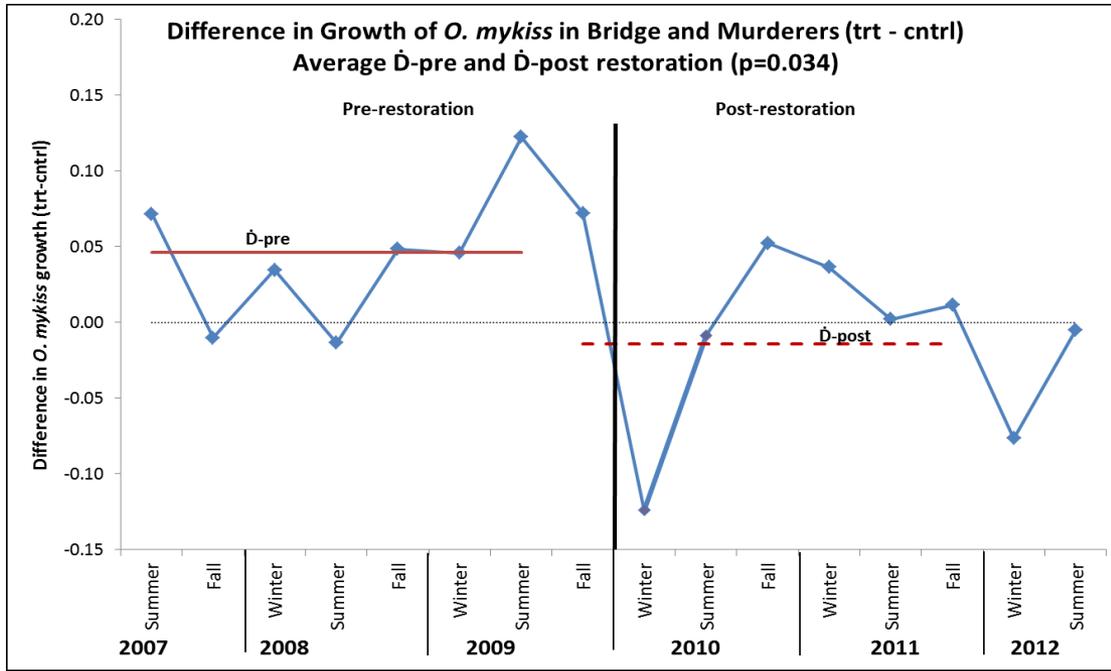

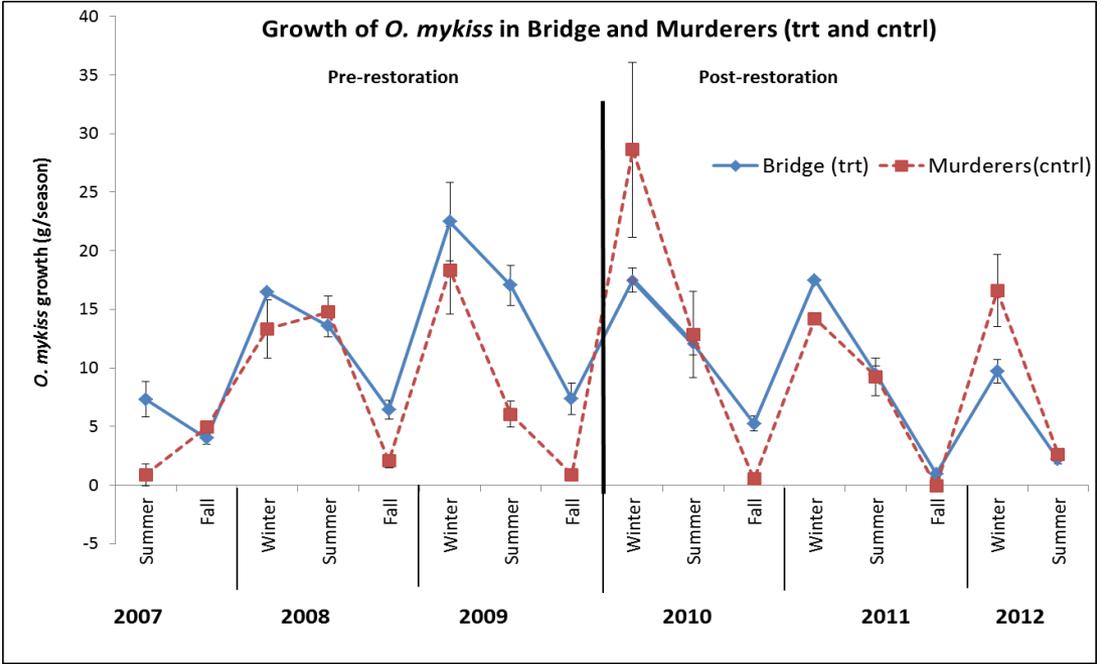

Density as a response to treatment actions

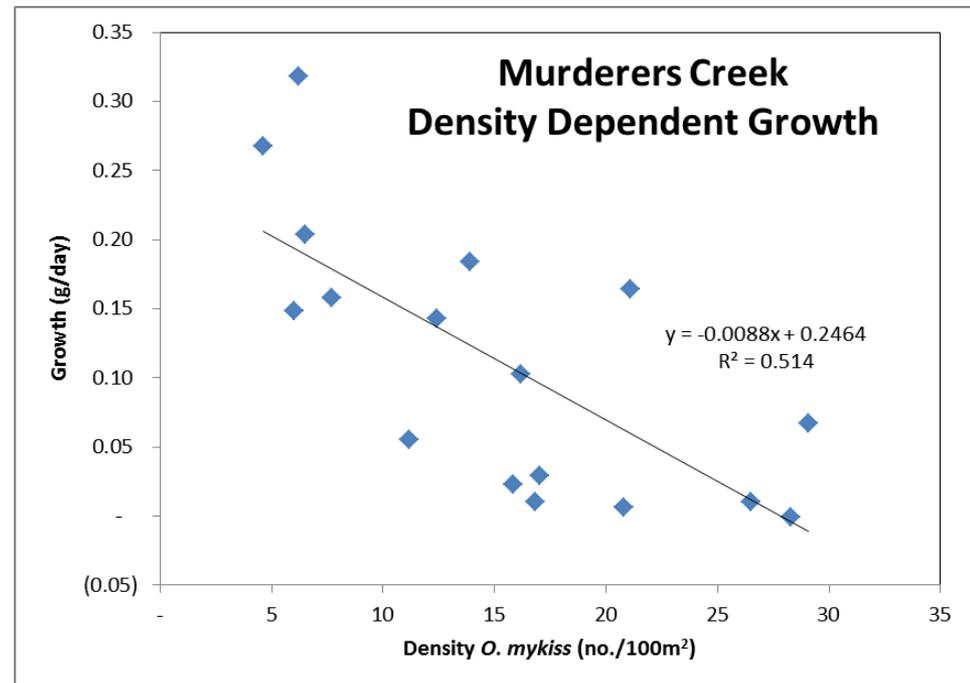

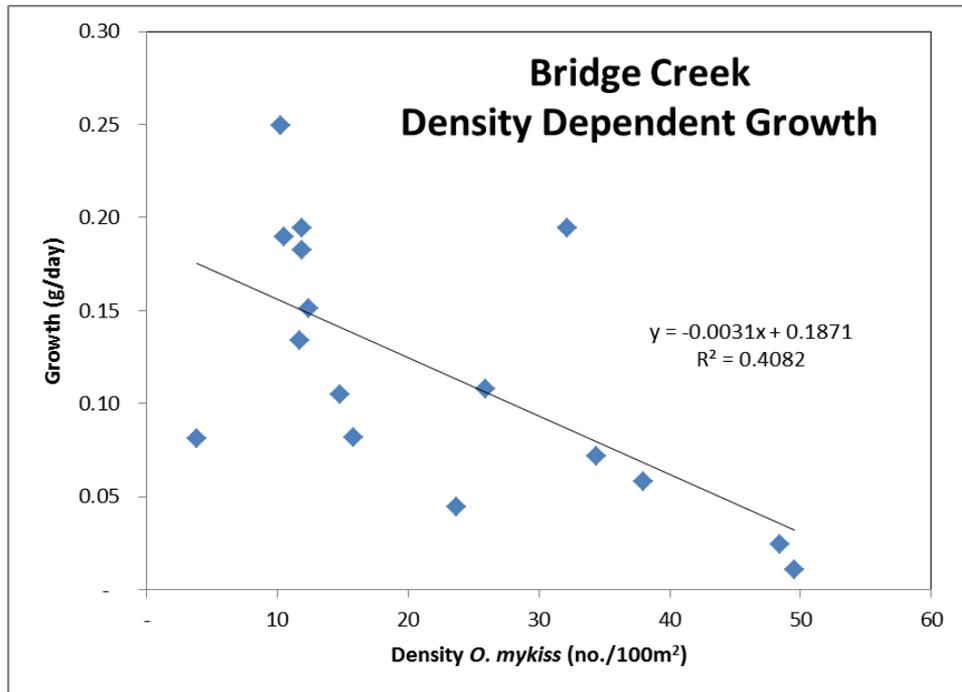

Survival as a response to treatment actions

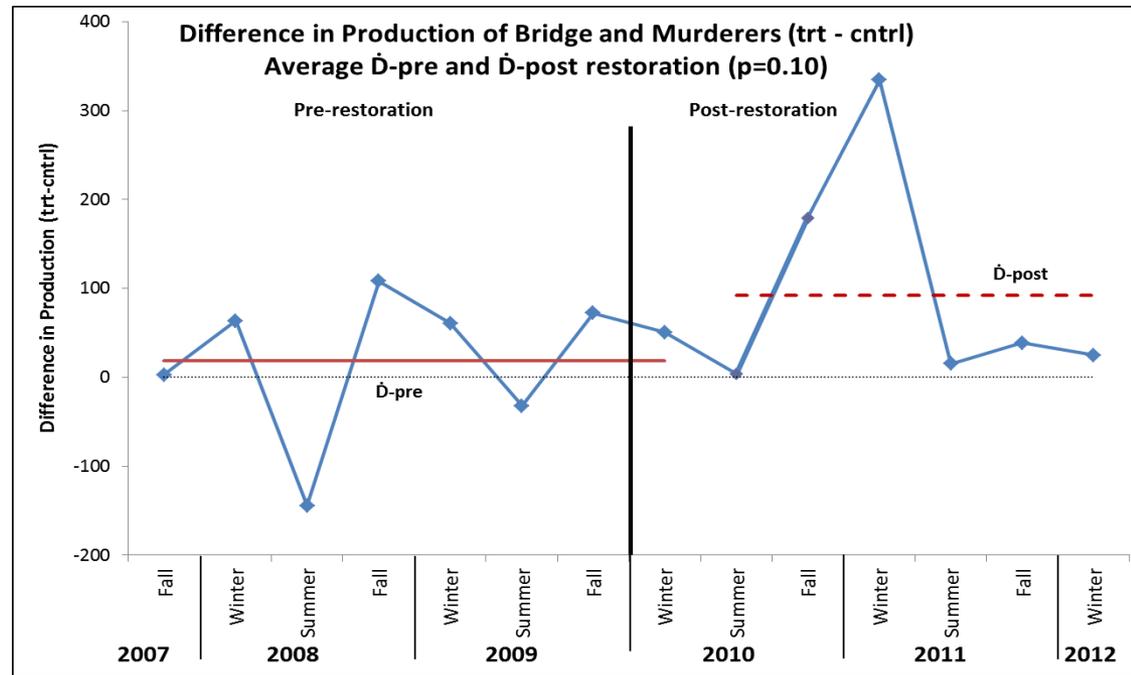

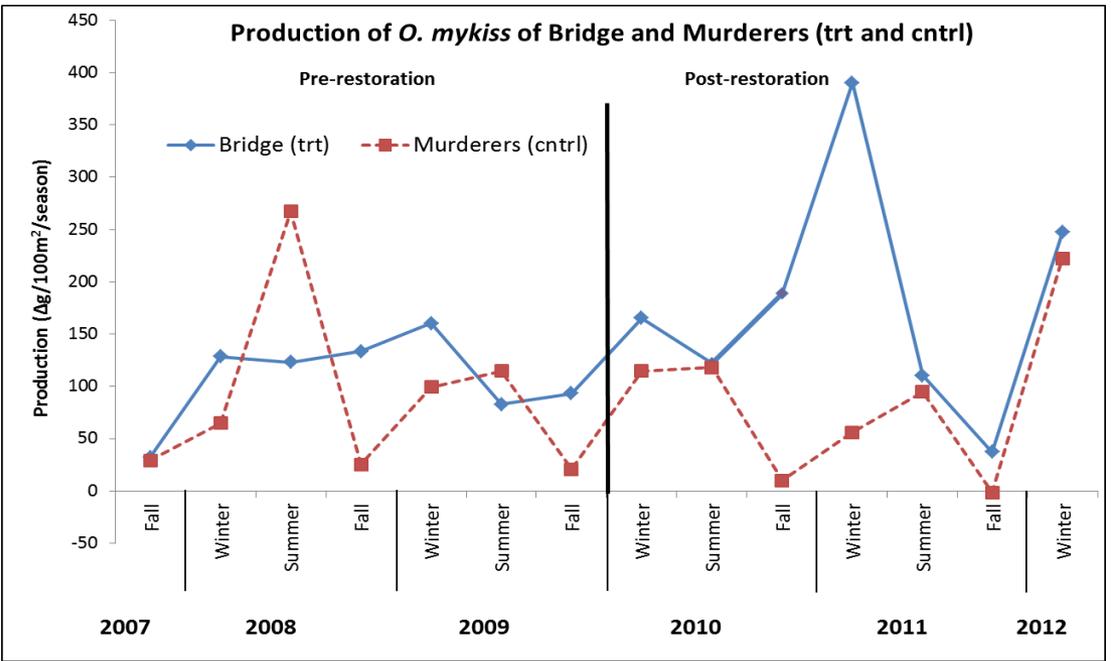

Growth as a response to treatment actions

Why not Growth as a response to treatment actions

Production as a response to treatment actions

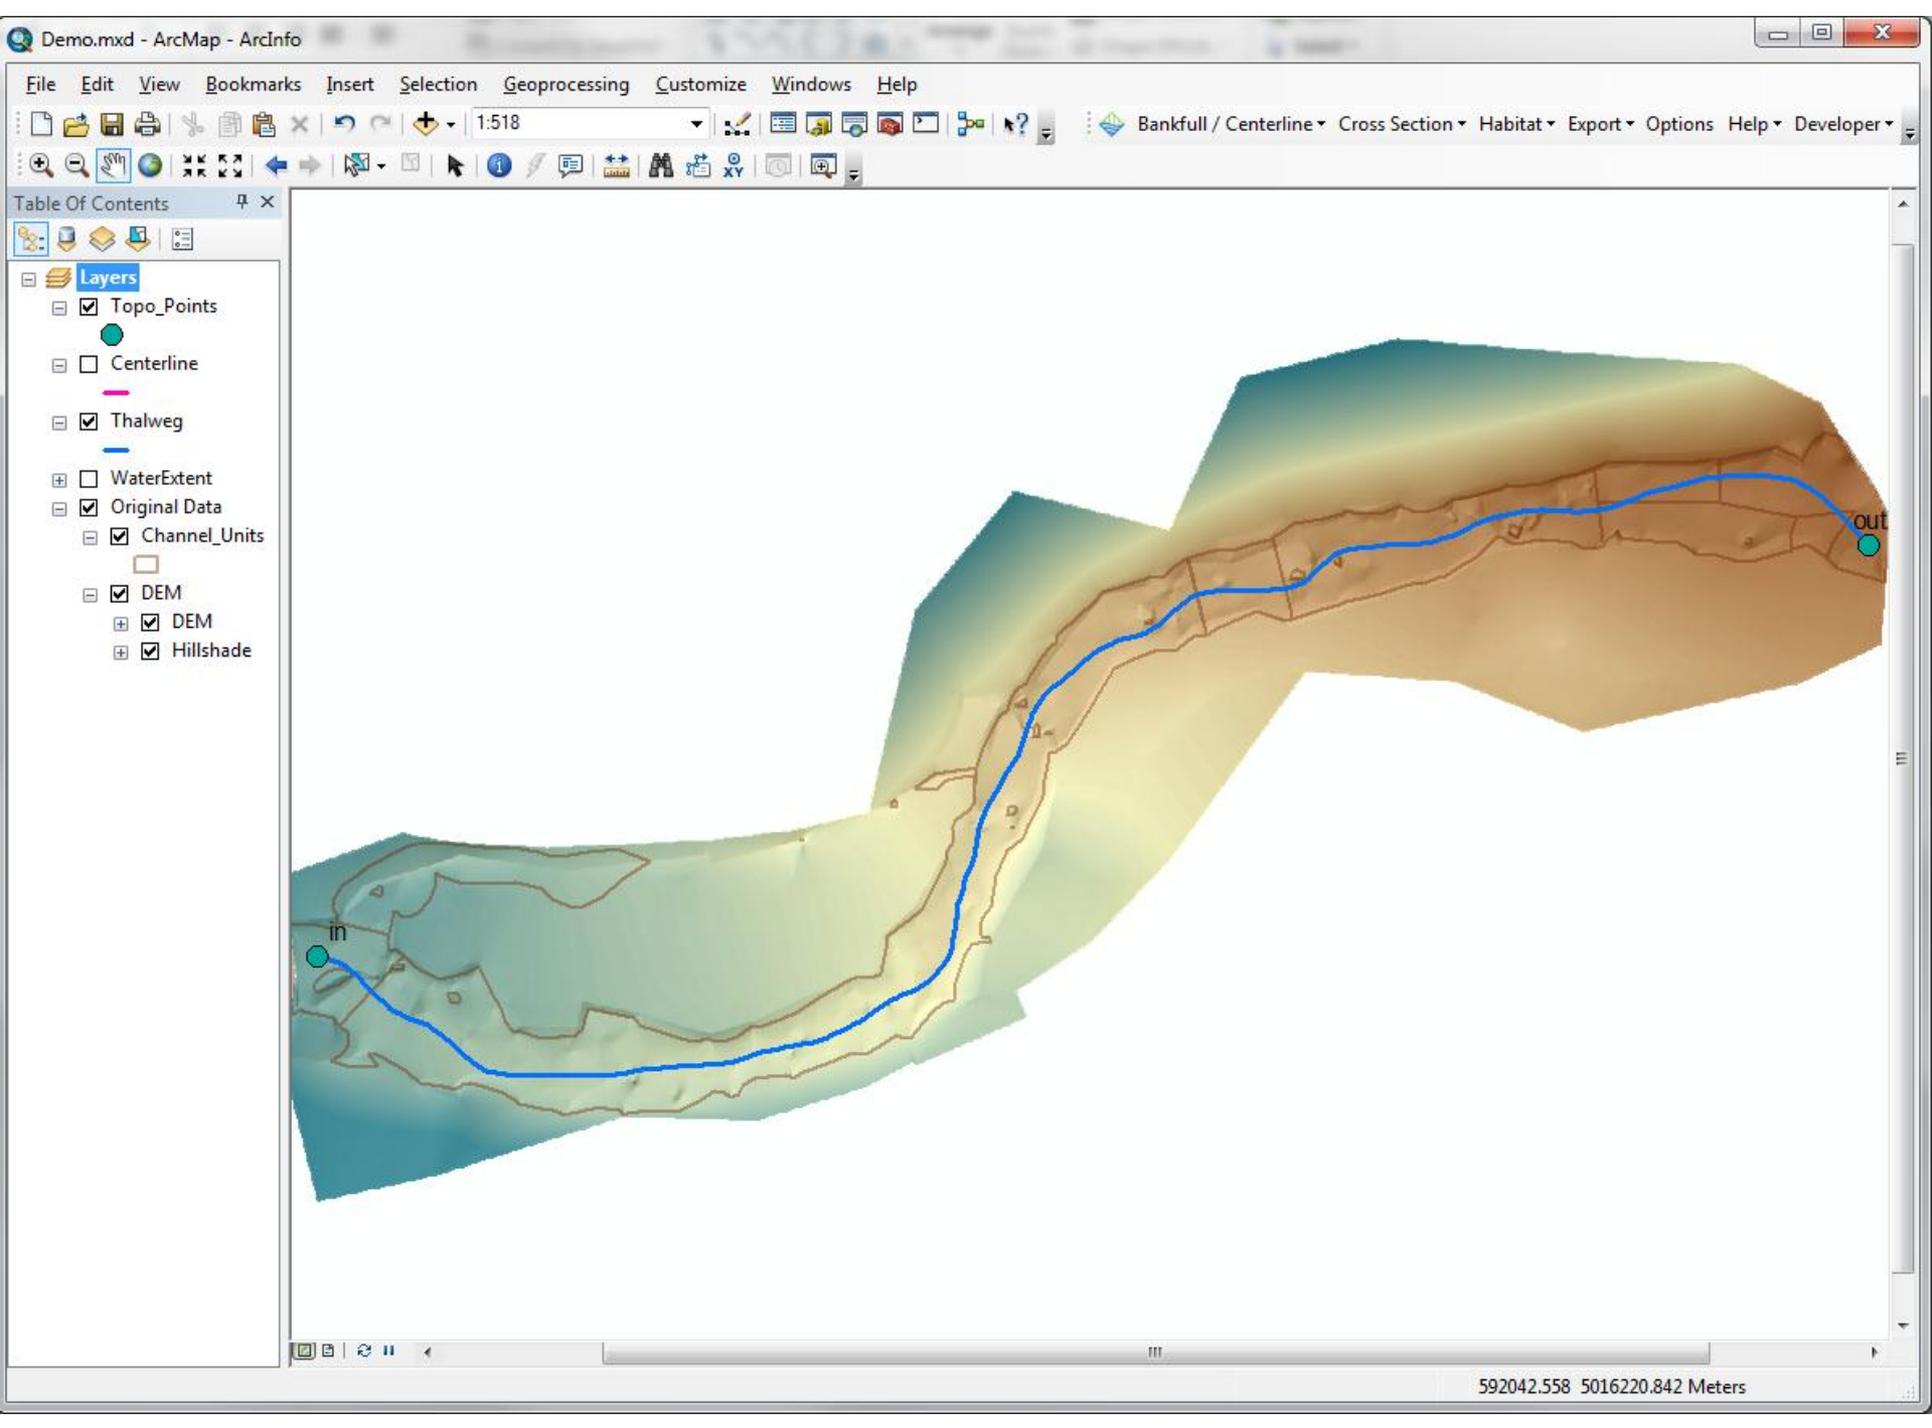

Yes, fish-habitat relationships that are characterized by ISEMP / CHaMP work in a manner that supports decision-making

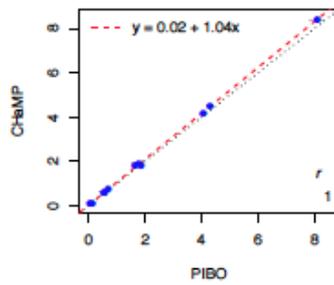

- Status of habitat q/q
- Projections of action impacts on fish
- Direct demonstration of actions' effect on fish
- Not done yet...

Next steps

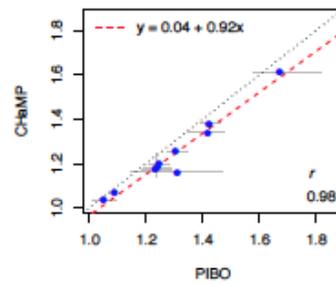

- Refine habitat metrics
 - what are the “best” indicators of habitat quality?
- Refine correlation methods (structured and not)
 - to support broad scale (extrapolation) habitat assessments
 - maximize utility of regional monitoring data
- Refine mechanistic methods
 - as basis for monitoring program refinement
 - as knowledge base for restoration planning
- Continue experimental (IMW) based contrast development
 - Broaden treatment type response set
- Acknowledge ISAB/ISRP’s patience / confidence / magnanimity
 - 8 years of work finally yielding to our vision
